

San Bernardino International Airport Authority

**ADDENDUM NO. 2
FOR THE ENGINEERING DESIGN AND PREPARATION OF PLANS AND SPECIFICATIONS
FOR A SOLAR POWER SYSTEM**

February 7, 2008

Q1. Is there someone who can assist me with obtaining this information other than yourself? I am requesting information for the RFP listed above. In order to compile data on the current electrical systems at SBD I will need to obtain past 3 year history of electrical usage from your utility company. Would you please indicate the number of meters and meter ID numbers, and name of utility company to be included to compile a data base for the RFP requirements.

A1. This will be performed by the selected consultant.

Q2. In the General Information section, page 2 item #7 we are to include a list of large commercial or industrial solar power projects greater than 100 MW for the past five or ten years?

A2. The 100 MW can be aggregate not one single project for the past five years not ten years.

Q3. I have reviewed the general information/scope document; however, given its current information I was unable to determine an approximate size of the system desired. It was requested that prospective firms provide past or current project examples of systems greater than 100MW. Is the designation "MW", as in "Mega Watt" correct?

A3. Error - Page 3 of 12 is incorrect, it should read: "Include/provide a list of representative large commercial or industrial solar power projects greater than 100 kW that the firm is currently involved in or have performed within the past five (5) years." It is recommended the consultants use example of projects ranging from 100 kW to 1,000 kW of system capacity.

Q4. Is there a budget range for this system?

A4. A budget for this project has not been established and will be accomplished in Task 5.

Q5. Could you provide any additional information such as an estimated range in kW of the size of the system?

A5. At this time we cannot provide a total current power demand for the airport.
