

ADDENDUM NO. 1
SOLAR POWER SYSTEM RFP
PRE-SUMBITTAL MEETING NOTES
Friday, February 01, 2008

1. Error – Page 3 of 12, Item 9. Strike and remove from consideration the last sentence in paragraph for “Other Supporting Data”.
2. Clarification – Page 1 of 12, bottom “A cost proposal is also being required at this time. The cost proposal shall detail all anticipated hourly work efforts, work products and work schedules.”

The detailed cost proposal for the RFP response will only be required for Tasks 1 through 5 of the Scope of Work/Services on Page 5 of 12. A second detailed cost proposal for Task 6 will be required after the Feasibility Study for SBIAA Commission approval of the Task.

3. Clarification – If there is a future public offering to purchase or lease a solar power system at the airport, it will be open to all bidders. This includes the contractor that completes Tasks 1 through 6 of the current Request for Proposal.
4. There was discussion of a new deadline for responses, however, the due date and time remains 2:00 p.m. local time on Friday, February 15, 2008. Depending upon the number and quality of submittals, there may be an interview process of selected firms before the successful proposal is selected.
5. Two maps and a table of information are posted on the web site to provide additional information for the responses to the RFP:
 - a. Current map of existing buildings with a table containing information on each building.
 - b. Conceptual Map illustrating potential future airport development out to 2025-2030. Very speculative as to actual facilities and time frame.
